

Assembly Instruction

Rear box pair with light keeper for TAMIYA Volvo FH16 Tibertruck (1:14,5)

Best.-Nr.: 2020-913A-HTH(L+R)

Version 1.0 – 20.03.2020

General Description

This polystyrene-milled parts set for a pair of storage boxes as an accessory to the TAMIYA trucks (1: 14.5) designed.

The storage boxes can be mounted on the vehicle frame and has on the outside of a removable cover, which is held with hooks and magnets (magnets are in a separate bag).

Inside the boxes technique can be accommodated.

A spacer is included for mounting on the vehicle frame, these are placed on the truck frame with the inscription "Frame".

For mounting on the vehicle frame are at distance spacers, these create a gap to accommodate any existing screw heads on the frame to produce.

Depending on the choice of locks (made of resin), these are included in the appropriate number.

These can be designed separately and then attached to the storage boxes.

The original Tamiya Volvo FH16 light houses are mounted on the enclosed light house with both the supplied countersunk screws (2.9) and the supplied self-tapping screws (2.2x6.5mm).

These complete units are attached to the rear of the storage boxes using the self-tapping screws (2.2x4.5mm) provided.

Assembly Procedure

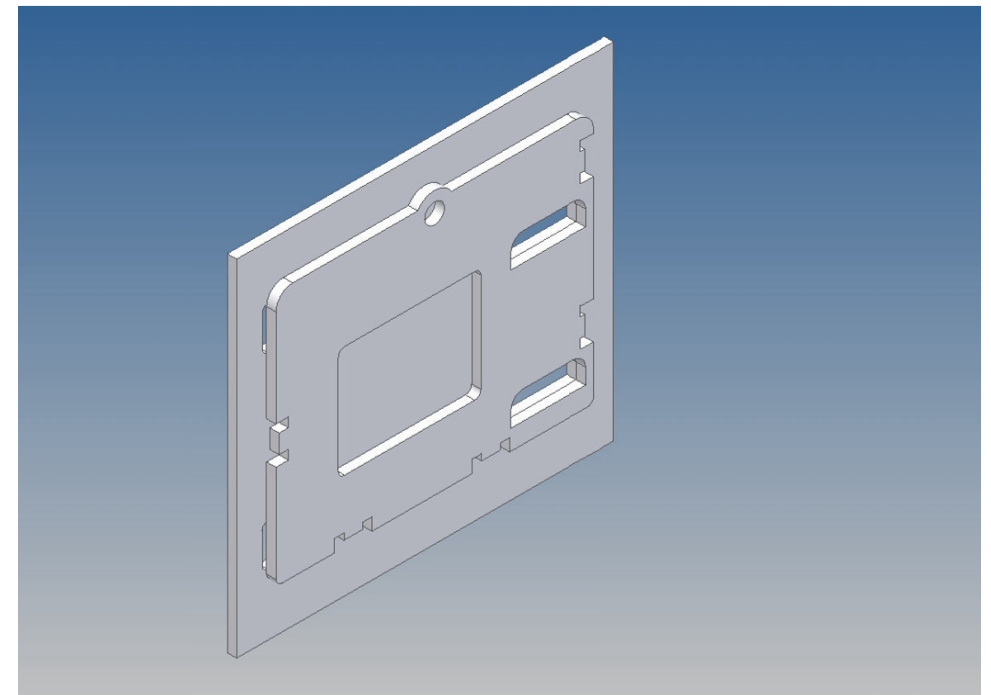

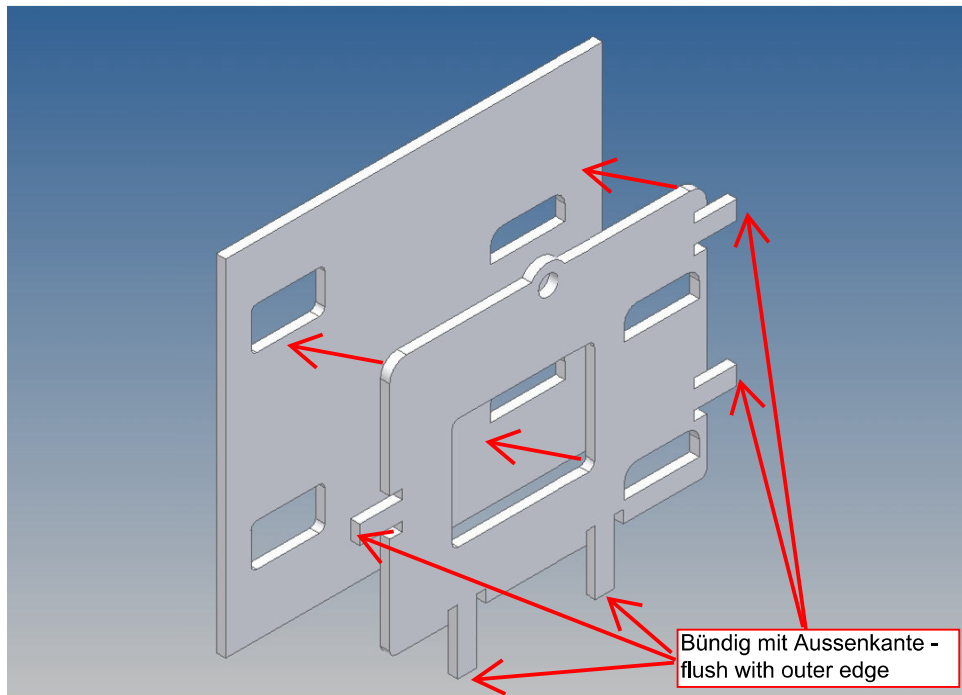

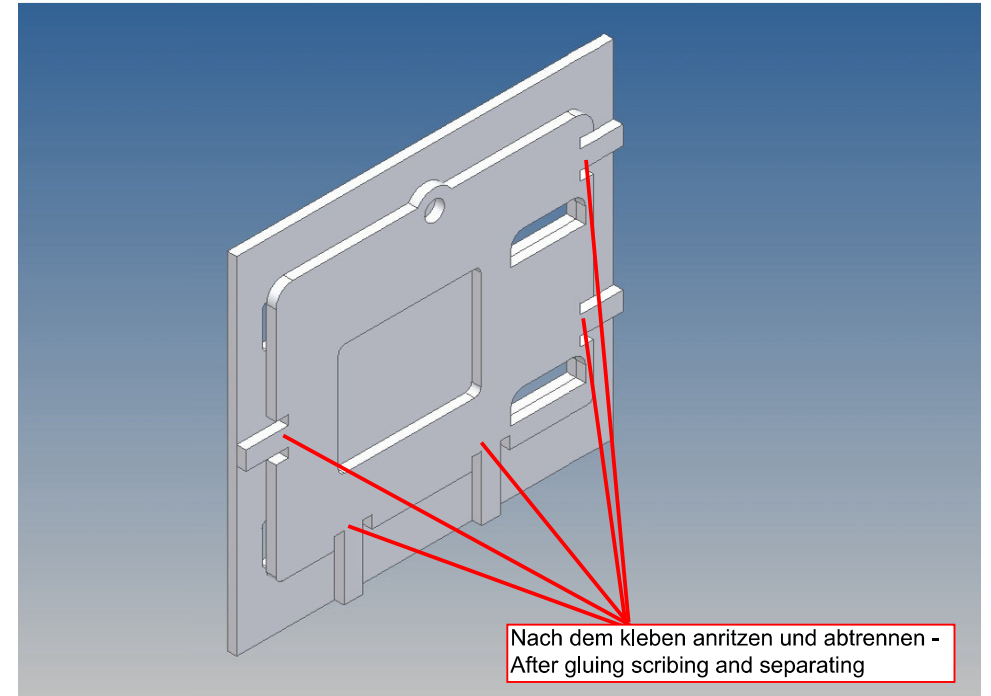

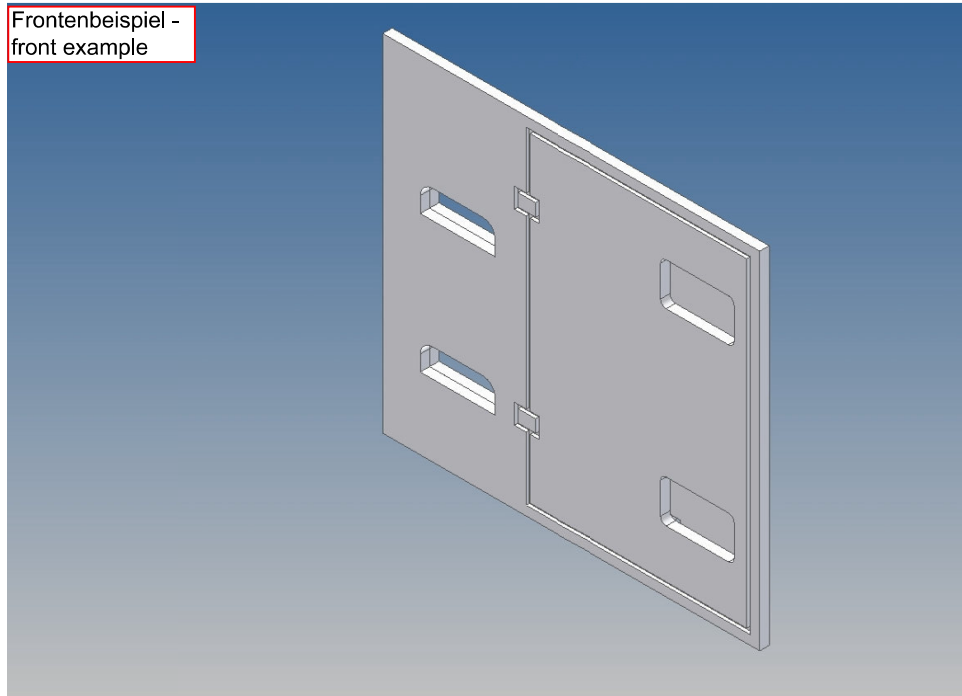

Before you put the parts together please read the assembly instructions carefully and pay attention to the assembly sequence and test the fitting accuracy of the parts before gluing them together.

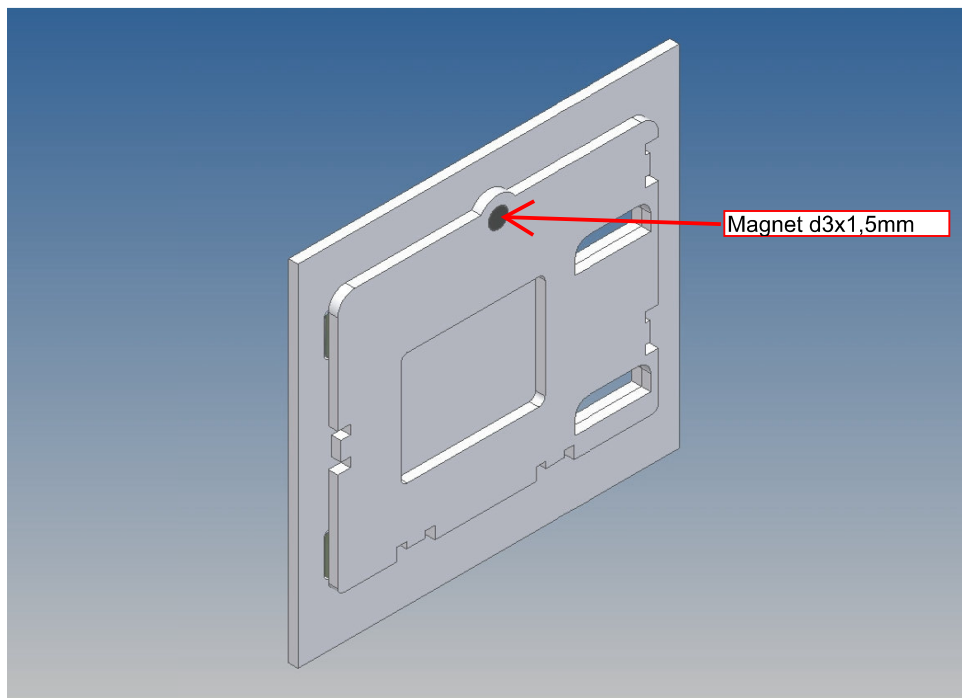

It is very important that at the first construction step paying attention to the correct side to put the box together, so that really produces a left or right box.

It is helpful to fix the parts at first only on a few points with super-glue and after a check along the edges fully with super-glue or a polystyrene-glue.

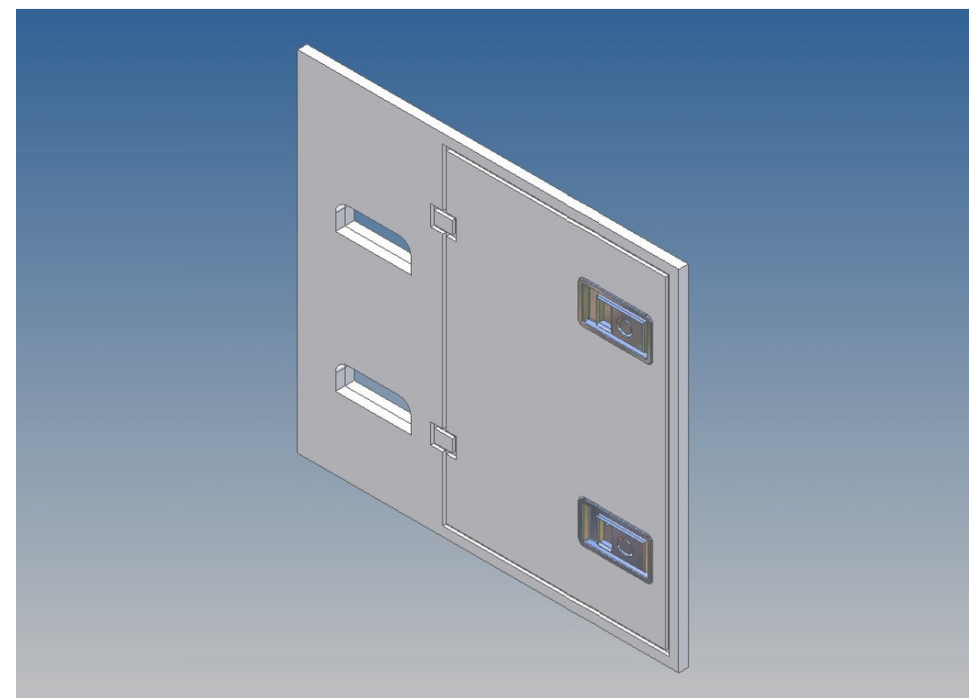

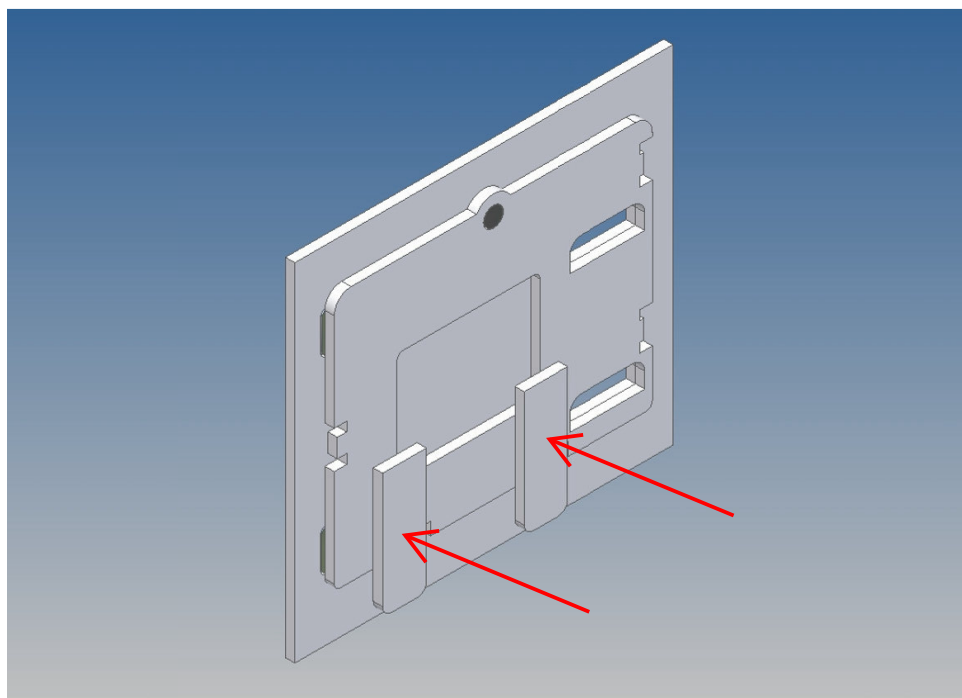

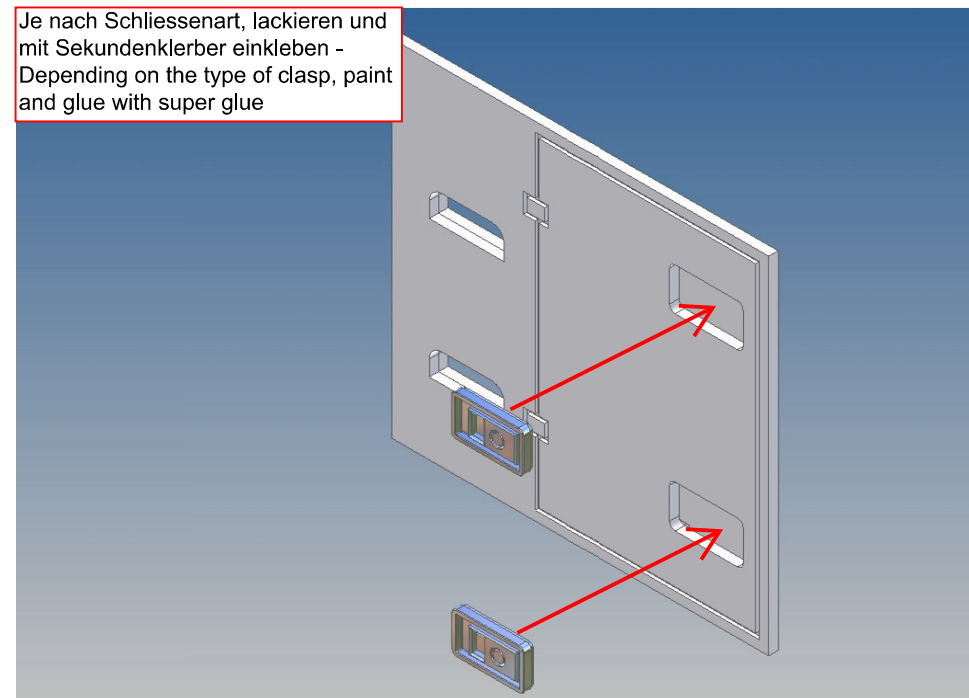

The parts are made of polystyrene, if you use super-glue in combination with activator spray, please be aware that the activator spray can destroy polystyrene – because of that you should use it very carefully or use only polystyrene-glue.
